LED ARRAY

CAMERA SERIES

RX	U	LK	DIs	DIs-VF

Our new IR camera series using LED ARRAY technology - the newest and the most efficient Infra-Red Technology. This new LED ARRY technology has many advantages compared with traditional IR LED

●Higher Brightness

A single LED ARRAY component used in Provision-ISR cameras is equal to over 100 traditional LED components and insures a brighter and clearer image during night time.

●Longer Illumination Distance

Due to the LED Array's outstanding illumination power, a single LED can light objects at a distance of 50 meters

●Longer Life

A single LED ARRAY component used in Provision-ISR cameras is equal to over 100 traditional LED components and insures a brighter and clearer image during night time.

●Lower Power Consumption

Compared to traditional LED technology, the LED Array's power consumption is three (3)times lower

●EX-Military

Until recently LED Array Technology was used only in Military applications.Due to decreasing prices it has recently begun to be employed in normal civilian uses. Its "Military background" insures the technology survivability and reliability.
